Terminal chaos for information processing in neurodynamics

Chaos is universal as it may arise in any system governed by one of a class of quite common, suitable nonlinear dynamic laws. This book discusses both the experimental observation and theoretical interpretation of chaos in chemical and biochemical systems.

Chaos in Chemistry and Biochemistry

In Study 1, decision makers in untidy environments evinced less confirmatory information processing than decision makers in tidy environments. Study 2 replicated this finding and demonstrated that divergent thinking is an important precondition of the relationship between disorder and confirmatory information processing.
