PHYS 460/660: Computational Methods for Quantum Mechanics The Canon of Quantum "Churches"
Living in Hilbert Space 1. For every system there is a complex Hilbert space: 2. States of the system are unit vectors in this space (or, more properly, 1-dim subspaces of H , or projection operators onto H). 3.

Computational Methods for Quantum Mechanics

In quantum systems, the computational space increases exponentially with the size of the system which enables exponential parallelism. This parallelism could lead to exponentially faster quantum algorithms than possible

Mathematical Methods in Quantum Mechanics

A theoretical and computational framework is presented to obtain accurate controls for fast quantum state transitions that are needed in a host of applications such as nano electronic devices and quantum computing.

Computational Techniques for Optimal Control of Quantum System

All quantum chemical calculations use a special system of units which, while not part of the SI, are very natural and greatly simplify expressions for various quantities.
