Welcome to Lectures on Continuum Physics. The idea for these Lectures on Continuum Physics grew out of a short series of talks on materials physics at University of Michigan, in the summer of 2013. Those talks were aimed at advanced graduate students, post-doctoral scholars, and faculty colleagues.

One of the oddities of contemporary physics education is the nearly complete absence of continuum mechanics in the typical undergraduate or graduate curriculum.

Continuum Mechanics in Physics Education

The subject of all studies in continuum mechanics, and the domain of all physical quantities, is the material body. A material body $B = \{X\}$ is a compact measurable set of an infinite number of material elements X , called the material particles or material points, that can be placed in a one-to-one correspondence with triplets of real numbers.

where J is the polar moment of inertia and μ is the shear modulus. (d) Consider the case of a circular cross section. Find the solution of the problem: $r^2 = 0$ in S ; $\sigma_{rn} = e_n \times \text{on } @S$; where $@ = @n = ; n$. Assume that $= (r)$ where $r = p x_1^2 + x_2^2$ and $r^2 = 1 r d d (r d)$. The purpose is to reestablish rather complete basic balance equations and boundary conditions for polar thermomechanical continua based on the restudy of the traditional theories of micropolar thermoelasticity and thermopiezoelectricity.

Renewal of basic laws and principles for polar continuum

Abstract: A complete theoretical presentation of the Continuum-mechanical, Anisotropic Flow model, based

on an anisotropic Flow Enhancement factor (CAFFE model) is given. The CAFFE model is an application of the theory of mixtures with continuous diversity for the case of large polar ice masses in which induced anisotropy occurs.

Continuum Physics Problem set 5 The first two problems in this set extend fundamental ideas a bit further. The next three are supposed to help you visualize basic concepts in stress analysis: stress distributions in particular.

Continuum Physics, Volume III: Mixtures and EM Field Theories discusses the field theories for bodies composed of different substances, such as mixtures and interaction of electromagnetic effects with the deformable bodies.

Lecture Notes on Classical Mechanics (A Work in Progress)

Abstract. Classical continuum physics deals with materials without a visible microstructure. That is, the scale of observation is large compared to the molecular scale, but small relative to other heterogeneities within the system.
